#### Abstract

AIM: To study the association of colorectal carcinoma with diet, smoking, alcohol, physical activity, body mass index, family history and diabetes.

METHODS: All consecutive patients with colorectal carcinoma (CRC) confirmed by histopathology diagnosis were included. Age ( $\pm$  5 years) and gender matched controls were selected among the patients admitted in surgery ward for various conditions without any co-existing malignancy. Food Frequency Questionnaire (FFQ) was developed and validated after pretesting by investigator trained in data collection
