Circular RNAs in colorectal cancer: Possible roles in regulation of cancer cells

Taborda MI *et al.* CircRNA in colorectal cancer

María Isabel Taborda, Sebastian Ramirez, Giuliano Bernal

Abstract

Colorectal cancer (CRC) is the third most commonly diagnosed cancer in the world and the fourth principal cause of cancer deaths worldwide. Currently, there is a lack of low cost and noninvasive screening tests for CRC, becoming a serious health problem. In this context, a potential biomarker for the early detection of CRC has recently gained attention. Circular RNAs (circRNA), a re-discovered, abundant RNA specie, is a type of noncoding covalent closed RNAs formed from

Match Overview
