**Advancement in high dose therapy and autologous stem cell rescue in lymphoma**Isidori A *et al.* HDT/ASCT in lymphoma

Alessandro Isidori, Cristina Clissa, Federica Loscocco, Barbara Guiducci, Sara Barulli, Lara Malerba, Elisa Gabucci, Giuseppe Visani

**Abstract**

Although advanced stage aggressive non-Hodgkin's lymphomas (NHL) and Hodgkin's disease (HD) are thought to be chemotherapy-responsive cancers, a considerable number of patients either relapse or never attain a remission. High-dose therapy (HDT) followed by autologous stem cell transplantation (ASCT) is often the only possibility of cure for most of these patients. However, many controversial issues still remain with respect to

HDT/ASCT for lymphomas, including its role for the optimal timing of transplantation.
