Screening for colorectal cancer in patients with inflammatory bowel disease.

Should we already perform chromoendoscopy in all our patients?

Huguet JM et al. Chromoendoscopy in IBD

Jose María Huguet, Patricia Suárez, Luis Ferrer-Barceló, Isabel Iranzo, Javier Sempere

Abstract

Patients with inflammatory bowel disease (IBD) have a greater risk of colorectal cancer than the general population. Therefore, they are included in special programs for screening and follow-up. Chromoendoscopy, which has a high diagnostic yield in the detection of neoplasia, is generally the recommended endoscopy technique. However, this procedure does have some disadvantages
