Abstract

Endoscopic submucosal dissection (ESD) and related procedures are minimally invasive and cost-effective alternates to surgery. However, there is no approved or listed current procedural terminology (CPT) for ESD. We aimed to review the current reimbursement process hurdles for ESD procedures in private practice model in United States. We reviewed the data of two advanced endoscopists (one in New York and other in Pennsylvania State) performing ESD in their private practice set-ups. We found the reimbursement process was complex, with number of refusals varied from 0-9 for ESD procedures. It was not paid at all in 8.3% of cases by the medical insurance. Endoscopic mucosal resection, which is considered inferior as compared to ESD, but has a listed CPT, was denied in only 0.83% cases. Our data highlights the billing hurdles by the

Minimally invasive therapy may obviate the need for major **open-surgery procedures**. In terms of health outcomes, it appears to offer the following advantages: elimination of the need for general anesthesia, the absence of the sequelae of open surgery procedures, minute scars, short hospital stays or outpatient treatment, and a much more rapid return to normal activity.
