Abstract: Aorto-enteric fistula (AEF) is a rare life-threatening condition. Early recognition and diagnosis are of paramount importance to improve outcome. In this article four cases of AEF with relevant pre- and post-procedural images are presented to demonstrate the utility of cross-sectional imaging in the work-up of AEF

Primary Aortoduodenal Fistula: A Case Report and Current ...

<https://pubmed.ncbi.nlm.nih.gov/33549801>

We also review the current literature regarding epidemiology, pathology, diagnostics, management, and case reports from 2015 to present. Overall, timely diagnosis and treatment is imperative for reducing mortality from primary aortoduodenal fistula, and although formal consensus is lacking regarding most clinical aspects, an increasing number of case reports has helped describe options for management.

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3731696>

Feb 24, 2013 · 1. Introduction. Primary aortoenteric fistulas are a rare cause of massive bleeding from the upper gastrointestinal tract, with about 350 cases reported in the literature until 2006. 1–3 Most of them (about 70%) are the result of fistulization between the abdominal aorta and the duodenum, due to a non-specific abdominal aortic aneurysm of atherosclerotic etiology. 1 Less frequently they may ...
