Upper non-variceal gastrointestinal bleeding - review the effectiveness of endoscopic hemostasis methods

Mirosław Szura, Artur Pasternak

Abstract

Upper nonvariceal gastrointestinal bleeding is a condition that requires immediate medical intervention and has a high associated mortality rate (exceeding 10%). The vast majority of upper gastrointestinal bleeding cases are due to peptic ulcers. *Helicobacter pylori* infection, non-steroidal anti-inflammatory drugs and aspirin are
