Retrospective Study

Hospitalization for esophageal achalasia **9** in the United States

Daniela Molena, Benedetto Mungo, Miloslawa Stem, Anne O Lidor

Abstract

AIM: to assess the outcome of different treatments in patients admitted for esophageal achalasia in the United States.

METHODS: this is a retrospective analysis using the Nationwide Inpatient Sample over an 8-year period (2003-2010). Patients admitted with a primary diagnosis of achalasia were divided into 3 groups based on their treatment: (1) Group 1: patients who underwent Heller myotomy during their hospital stay; (2) Group 2:
