Laparoscopic endoscopic cooperative surgery as ³⁵a minimally invasive treatment for gastric submucosal tumor

Tsutomu Namikawa, Kazuhiro Hanazaki

Abstract

Laparoscopic wedge resection is a useful procedure for treating patients with submucosal tumor (SMT) including gastrointestinal stromal tumor (GIST) of the stomach. However, resection of intragastric-type SMTs can be problematic due to the difficulty in accurately judging the location of endoluminal tumor growth, and often excessive amounts of healthy mucosa are removed; thus,
