**Pancreatic insulinomas: Laparoscopic management**

Pantelis Antonakis, Hutan Ashrafian, Alberto Martinez-Isla

### Abstract

Insulinomas are rare pancreatic neuroendocrine tumours that are most commonly benign solitary and intra-pancreatic. Uncontrolled insulin overproduction from the tumour produces neurological and adrenergic symptoms of hypoglycaemia. Biochemical diagnosis is confirmed by the presence of Whipple's triad along with corroborating measurements of blood glucose, insulin, proinsulin, C peptide,  $\beta$ -hydroxybutyrate and negative tests
