Achieving competence in colonoscopy: Milestones and the need for a new endoscopic curriculum in gastroenterology training

Sara B Stanford, Stephanie Lee, Candace Masaquel, Robert H Lee

Abstract

Colonoscopy is considered to be the most effective tool for reducing Colorectal Cancer (CRC) morbidity and mortality. As a result, certifying trainee competence in the performance of colonoscopy is critical to maximizing CRC screening and prevention efforts. Guidelines on training and accreditation around the world have been revised to emphasize the attainment of milestones in the technical and cognitive skills necessary to perform the procedure. To meet this challenge, new evaluation systems have been developed to measure trainee competence through all aspects of colonoscopy training.
