Challenges of banding jejunal varices in an 8 years old child

Dalia Belsha, Mike Thomson

Abstract

Endoscopic variceal ligation (EVL) by the application of bands on small bowel varices is a relatively rare procedure in gastroenterology and hepatology. There are no previously reported paediatric cases of EVL for jejunal varices. We report a case of an eight year old male patient with a complex surgical background leading to jejunal varices and short bowel syndrome, presenting with obscure but profound acute gastrointestinal bleeding (AGIB). Wireless capsule endoscopy (WCE) and double balloon enteroscopy (DBE) confirmed jejunal varices as the source of bleeding. The
