Abstract

AIM: To summarize the clinical impact of a formal training for ³the effectiveness and safety of endoscopic submucosal dissection for gastrointestinal cancer.

METHODS: We searched databases including PubMed, EMBASE and the Cochrane Library and Science citation Index updated to August 2014 to include eligible articles. In the Meta-analysis, the main outcome measurements were *en bloc* resection rate, local recurrence rate (R0) and the incidence of procedure-related complications (perforation, bleeding).

RESULTS: *En bloc* resection was high for both, dissecting stomach tumors with an overall percentage of 93.2% (95% CI 90.5, 95.8) and dissecting colorectal tumors with an overall percentage of 89.4% (95% CI 85.1, 93.7). Although the number of
