**Current status of laparoendoscopic rendezvous in the treatment of cholelithiasis with concomitant choledocholithiasis**

Baloyiannis Ioannis, Tzovaras George

**Abstract**

The current evidence in favor of the laparoendoscopic rendezvous is promising and demonstrates the main advantages of this technique in regard to shorter hospital stay and selective cannulation of the common bile duct, avoiding thus the inadvertent cannulation of the pancreatic duct. In addition, in the rendezvous technique the contrast medium is not injected retrogradely as during the traditional ERCP, when the medium
