Carcinoma *in situ* in a 7mm gallbladder polyp: Time to change current practice?Kasle D *et al.* Gallbladder polyp management based on sizeDavid Kasle, Amir A Rahnemai-Azar, Shahida Bibi, Vinaya Gaduputi, Brian F Gilchrist,  
Daniel T Farkas**Abstract**

Detection of polypoid lesions of the gallbladder is increasing in conjunction with better imaging modalities. Accepted management of these lesions depends on their size and symptomatology. Polyps that are symptomatic and/or greater than 10mm are generally removed, while smaller, asymptomatic polyps simply monitored. Here, a case of carcinoma-in-situ is presented in a 7mm gallbladder polyp. A 25-year-old woman, who had undergone a routine cholecystectomy, was found to have an incidental 7mm polyp containing carcinoma in situ. She had few to no risk factors to alert to her condition.
