Management of gastric subepithelial tumors: The role of endoscopy

Su Young Kim, Kyoung Oh Kim

Abstract

With the wide use of esophagogastroduodenoscopy (EGD), the incidence of gastric subepithelial tumor (SET) diagnosis has increased. While the management of large or symptomatic gastric SETs is obvious, treatment of small (≤ 3 cm) asymptomatic gastric SETs remains inconclusive. Moreover, the presence of gastrointestinal stromal tumors (GIST) with malignant potential is of concern, and endoscopic treatment of gastric SETs remains a subject of debate. Recently, numerous studies
