Manuscript Type: Meta-Analysis

Endoscopic submucosal dissection of gastric **2** tumors: A systematic review and meta-analysis

Emmanuel Akintoye, Itegbemie Obaitan, Arunkumar Muthusamy, Olalekan Akanbi, Mayowa Olusunmade, Diane Levine

Abstract

AIM: To systematically review the medical literature in order to evaluate the safety and efficacy of gastric ESD.

METHODS: We performed a comprehensive literature search of MEDLINE, Ovid, CINAHL, and Cochrane for studies reporting on the clinical efficacy and safety profile of gastric ESD.

RESULTS: 29506 tumors in 27155 patients (31% female) who underwent gastric ESD between 1999 and 2014 were included in this study. R0 resection rate was 90% (95% CI, 87-92%) with significant between-study heterogeneity ($p < 0.001$) which was partly explained by difference in region ($p = 0.02$) and sample size ($p = 0.04$). Endoscopic en bloc and curative resection rates were 94% (95% CI, 93-96%) and 86% (95% CI, 83-89%) respectively. The rate of immediate and delayed perforation rates were 2.7% (95% CI,
