Case Control Study

23
Comparative study of outcomes following laparoscopic Roux-en-Y gastric bypass and sleeve gastrectomy in morbidly obese patients

Harshit Garg, Pratyusha Priyadarshini, Sandeep Aggarwal, Samagra Agarwal, Rachna Chaudhary

Abstract

AIM

To compare the impact of Laparoscopic Roux-en-Y Gastric Bypass (LRYGB) and Laparoscopic Sleeve Gastrectomy (LSG) on weight loss and obesity related comorbidities over two year follow-up via case control study design.

METHODS

40 patients undergoing LRYGB, who completed their two year follow-up were matched with 40 patients undergoing LSG for age, gender, Body Mass Index (BMI) and presence of Type 2 Diabetes Mellitus (T2DM). Data of these patients was retrospectively reviewed to compare the outcome in terms of weight loss and improvement in comorbidities i.e. T2DM, hypertension (HTN), Obstructive Sleep Apnea Syndrome (OSAS), hypothyroidism and Gastroesophageal Reflux Disease (GERD).
