Apr 01, 2021 · **Ovarian cancer** remains one of the most common causes of death among gynecological malignancies afflicting women worldwide. Among the gynecological cancers, cervical and endometrial cancers confer the greatest burden to the developing and the developed world, respectively; however, the overall survival rates for patients with **ovarian cancer** are worse than the two aforementioned.

With this review, we provide the state of the art concerning brain **metastases** (BMs) from **ovarian cancer** (OC), a rare condition. Clinical, pathological, and molecular features, **treatment** options, and future perspectives are comprehensively discussed. Overall, a diagnosis of high-grade serous OC and an advanced disease stage are common features among patients who develop brain **metastases**.

Addressing hepatic metastases in ovarian cancer: Recent advances in treatment algorithms and the need for a multidisciplinary approach

Hepatic metastases in ovarian cancer

#### Abstract

The lifetime risk for ovarian cancer incidence is 1,39% and the lifetime risk of death is 1,04%. Most ovarian cancer patients are diagnosed at advanced stages (III,IV) due to no distinct symptoms or existing preventive tests. Liver metastases have been found in up to 50% of patients dying of advanced stage ovarian cancer. Recent studies suggest the need for a multidisciplinary approach, from initial diagnosis to oncologic surgery and chemotherapy treatments, mandating the involvement of Gynecologic Oncologists, Surgical Oncologists, Medical Oncologists, Hepatobiliary Surgeons, and Interventional

### Stereotactic Ablative Brachytherapy: Recent Advances in ...

<https://www.mdpi.com/2072-6694/13/14/3493/htm> ▾

Brachytherapy (BT), a type of focal anti-cancer radiotherapy, delivers a highly focused radiation dose to localized tumors, sparing surrounding normal tissues. Recent technological advances have helped to increase the accuracy of BT and, thus, improve BT-based cancer treatment. Stereotactic ablative brachytherapy (SABT) was designed to improve the ablative effect of radiation, which was ...
