Treatment of <sup>7</sup>chronic hepatitis C in liver transplant candidates and recipients: Where do we stand?

Chrysoula Pipili, Evangelos Cholongitas

### Abstract

The first generation direct antiviral agents (DAAs) highlighted substantial prognosis improvement among <sup>11</sup>liver transplant (LT) candidates and recipients with recurrent hepatitis C virus (HCV) infection. During 2014, second generation DAAs <sup>29</sup>are associated with high sustained virological response rates (>95%), shortened duration courses and relatively few toxicities. In keeping with the currently available data, patients with
