Influence of gut bacteria on both the development and progression of non-alcoholic fatty liver disease

Ali Abdul-Hai, Ali Abdallah, Stephen DH Malnick

**Abstract**

The intestine of the human contains a dynamic population of microbes that have a symbiotic relationship with the host. In addition there is an effect of the intestinal microbiota on metabolism and digestion. Non-alcoholic fatty liver disease (NAFLD) is a common cause worldwide of hepatic pathology and is thought to be the hepatic manifestation of the metabolic syndrome. In this review we examine the effect of the human microbiome on the
