Downstaging disease in patients with HCC outside up-to-seven criteria: Strategies using DSM-TACE

Antonio Orlacchio, Fabrizio Chegai, Stefano Merolla, Simona Francioso, Costantino Del

Giudice, Mario Angelico, Giuseppe Tisone, Giovanni Simonetti

Abstract

To evaluate the possible downstaging rates in HCV patients with hepatocellular carcinoma (HCC) treated with trans-arterial chemoembolization with degradable starch microspheres (DSM TACE), with the attempt to reach new Milan criteria (nMC) for transplantation. This study was approved by the Ethics Committee of our institution. From September 2013 to March 2014 eight patients (5 men and 3 women) with liver cirrhosis and multinodular HCC, that did not meet new Milan Criteria at baseline, were
