1 Transjugular intrahepatic portosystemic stent shunt for medically refractory hepatic hydrothorax. A systematic review and cumulative meta-analysis

Ivo C Ditah, Badr F Al Bawardy, Behnam Saberi, Chobufo Ditah, Patrick S Kamath

Abstract

AIM: To assess the effectiveness of TIPSS in refractory hepatic hydrothorax in a systematic review and cumulative meta-analysis **8**

METHODS: A comprehensive literature search was conducted on MEDLINE, EMBASE, and PubMed covering the period from January 1970 to August 2014. Two authors independently selected and abstracted data from eligible studies. Data were summarized using a random-effects model. Heterogeneity was assessed using the I^2 test.

RESULTS: Six studies involving a total of 198 patients were included in the analysis. The mean (SD) age of patients was 56 (1.8) years. Most patients (56.9%)
