4 Role of liver resection in the management of multinodular hepatocellular carcinoma

Osman Abbasoglu

Abstract

Hepatocellular carcinoma **1** is the third leading cause of cancer related deaths worldwide. Various treatment modalities have been applied to hepatocellular carcinoma (HCC) depending on the tumor load, functional capacity of the liver and the general condition of the patient. **2** According to Barcelona Clinic Liver Cancer staging strategy **2** and The American Association for the Study of Liver Disease guidelines, surgical resection is not advocated in the treatment of multinodular HCC
