Cognitive dysfunction and hepatitis C virus infection

Antonio Solinas, Maria Rita Piras, Angelo Deplano

Abstract

Cognitive dysfunction in patients with chronic **hepatitis C virus (HCV) infection** is a distinct form of minimal hepatic encephalopathy hepatic encephalopathy (MHE). In fact, the majority of positive HCV patients, irrespective of the grading of liver fibrosis, display alterations of verbal learning, attention, executive function, and memory when they are evaluated by suitable neuropsychological tests. Similarities between the cognitive dysfunction of HCV patients and MHE
