Autoantibodies in chronic hepatitis C: A clinical perspective

69

Janaína Luz Narciso-Schiavon, Leonardo de Lucca Schiavon

Abstract

60

Non-organ-specific autoantibodies (NOSA) and thyroid autoantibodies (TAAb) have been frequently found in chronic carriers of hepatitis C virus (HCV). With respect to endomysial antibodies (EmA) and tissue transglutaminase (tTG), it is controversial whether the prevalence of gluten-related seromarkers is higher in patients with HCV. In such cases, in addition to acknowledging any currently existing autoimmune disease, recognizing the risk of the patient developing an autoimmune disease
