Anticoagulation and antiplatelets as prophylaxis for hepatic artery thrombosis after liver transplantation

Abdullah A Algarni, Moustafa Mabrouk Mourad, Simon R Bramhall

**Abstract**

**13** Hepatic artery thrombosis (HAT) is the most serious vascular complication after liver transplantation (LT). Multiple risk factors have been identified to impact its development. Changes in haemostasis associated with end stage liver disease and the disturbance of the coagulation and anticoagulation cascades play an important role in development of this lethal complication

**Match Overview**

1	<b>CrossCheck</b> 143 words Ton Lisman. "Antiplatelet medication after liver transplantation: Does it affect outcome?", Liver Transplantation, 05/2	3%
2	<b>CrossCheck</b> 116 words Uchikawa, Y.. "Administration of Dalteparin Based on the Activated Clotting Time for Prophylaxis of Hepatic Vessel Thrombosis", Liver Transplantation, 05/2	2%
