**Sofosbuvir/velpatasvir: A promising combination**

Bonaventura A *et al.* Sofosbuvir/velpatasvir in HCV infection

**Aldo Bonaventura, Fabrizio Montecucco**

**Abstract**

Hepatitis C virus (HCV) affects 3% of the world population. It represents the main cause of chronic liver disease and is responsible for extra-hepatic complications, such as type 2 diabetes and cardiovascular diseases. HCV includes 7 genotypes differing in the nucleotide sequence variability, the geographic distribution, the rates of viral clearance, the risk of progression to liver fibrosis and to hepatocellular carcinoma, and the response to therapy. Last years have seen remarkable advances in the field of HCV infection with
