Manuscript Type: CASE REPORT

Hepatitis C virus cures after direct acting antiviral -related drug-induced liver injury: Case report

Yaakov Hasin, Shimon Shteingart, Harel Dahari, Inna Gafanovich, Sharon Floru, Marius Braun, Amir Shlomai, Anthony Verstanding, Ilana Deri, Susan L Uprichard, Scott J Cotler, Yoav Lurie

Abstract

13
The United States Food and Drug Administration (FDA) recently warned that
6
the direct acting antiviral (DAA) combination hepatitis C virus (HCV) treatment
25
of Paritaprevir, Ombitasvir, Dasabuvir, Ritonavir, and Ribavirin (PODr+R) can
10
cause severe liver injury in patients with advanced liver disease. Drug induced
21
liver injury was observed in a small number of patients with decompensated
20
cirrhosis treated with other DAAs but has not been reported in patients with
16
compensated cirrhosis. Methods: We report a case of a 74-year old woman with
7
chronic HCV and Child-Pugh class A cirrhosis treated with PODr+R. Frequent
blood samples were obtained during and after therapy for measurement of
serum biochemistries and HCV RNA levels. A new mathematical model that
includes infectious and non-infectious causes developed to retrospectively predict
