Observational Study

Influence of Proton Pump Inhibitors in the Development of Spontaneous Bacterial Peritonitis

Suelen A S Miozzo, Jorge A John, Marcelo C Appel-da- Silva, Isabella A Dossin, Cristiane V Tovo, Angelo A Mattos

Abstract

AIM: Bacterial infections are a frequent cause of death in patients with cirrhosis. Spontaneous bacterial peritonitis (SBP) is the most characteristic infection of cirrhotic patients. ²It has been suggested that acid suppression caused by ³proton pump inhibitors (PPIs) might favor gastric and duodenal bacterial colonization, leading to bacterial overgrowth and favoring a higher
