Autoimmune hepatitis in the setting of human immunodeficiency virus infection: A case series

Emmanuel Ofori, Daryl Ramai, Mel A Ona, Madhavi Reddy

Abstract

Liver injury in the setting of human immunodeficiency virus (HIV) infection is more commonly attributed to viral hepatitis or highly active antiretroviral treatment (HAART) toxicity. The severity of liver injury is an important cause of morbidity and mortality. The emergence of autoimmune diseases, particularly autoimmune hepatitis (AIH) in the setting of HIV infection, is rare. Previous reports indicate that elevated liver enzymes are a common denominator amongst these patients. We present two
