Interferon-free regimens ⁸ in patients with hepatitis C infection and renal dysfunction or kidney transplantation

Evangelos Cholongitas, Chrysoula Pipili, George Papatheodoridis

Abstract

Treatment of patients with chronic kidney disease (CKD) and chronic hepatitis C (CHC) differs from that used in the general CHC population mostly when GFR is below 30 ml/min, as sofosbuvir, the backbone of several current regimens, is officially contraindicated. Given that ribavirin free regimens are preferable in CKD, elbasvir/grazoprevir is offered in CHC
