Typical and atypical symptoms of Gastro Esophageal Reflux Disease: does *Helicobacter pylori* infection matter?

Laurino Grossi, Antonio Francesco Ciccaglione, Leonardo Marzio

Abstract

AIM: to analyze whether the presence of *Helicobacter pylori* (*H. pylori*) infection could affect the quality of symptoms in GERD patients.

METHODS: 144 consecutive patients referred to our Unit for suspected GERD were recruited for the study. All patients underwent esophageal pH-metric recording. For those with a positive test, C₁₃ Urea Breath Test (C₁₃ UBT) was then performed to assess the *H. pylori* status. GERD patients were stratified according to the quality of their symptoms and classified as typical, if affected by heartburn and regurgitation, and atypical if complaining of chest pain, respiratory and ENT features. *Hp*-negative patients were also asked whether
