Preoperative detection of intrahepatic venovenous shunt treated by microwave precoagulation during right hepatectomy

Jean-Baptiste Delhorme, Riccardo Méméo, Jacques Marescaux, Patrick Pessaux.

Abstract:

A 53-year-old woman underwent a 2-stage right hepatectomy for bilobar metastasis of an ileal neuroendocrine carcinoma. Preoperative 3D CT reconstruction helped to

dissect an intrahepatic venovenous shunt from the right and middle hepatic veins.
