1
 Predictive factors for a severe clinical course in ulcerative colitis: Results from
 population-based studies

Magnus Hofrenning Wanderås, Bjørn A Moum, Marte Lie Høivik, Øistein Hovde

Abstract

Ulcerative colitis (UC) is characterized by chronic inflammation of the large bowel in genetically susceptible individuals exposed to environmental risk factors. The disease course can be difficult to predict, with symptoms ranging from mild to severe. There is no generally accepted definition of severe UC, and no single outcome is sufficient to classify a disease course as severe. There are several outcomes indicating a severe disease course, including progression of the disease's extension, a
