Endovascular <sup>14</sup> treatment of aortoiliac aneurysms: from intentional occlusion of the internal iliac artery to branch iliac stent graft

Stevo Duvnjak

# Abstract:

<sup>9</sup> Approximately 20%–40% of patients with abdominal aortic aneurysms (AAA) can have unilateral or bilateral iliac artery aneurysms and/or ectasia. This influences and compromises the distal sealing zone during endovascular aneurysm repair. There are a few endovascular techniques that are used to treat these types of aneurysms, including
