Imaging spectrum of spinal dysraphism on MR: A pictorial review

Jyoti Kumar, Muhammed Afsal, Anju Garg

Abstract

Congenital malformations of spine and spinal cord are collectively termed as spinal dysraphism. It includes a heterogeneous group of anomalies which result from faulty closure of midline structures during development. Magnetic Resonance Imaging (MRI) is now considered the imaging modality of choice for diagnosing these conditions. The purpose of this article is to review the normal development of spinal cord and spine and reviewing the MR imaging features of spinal dysraphism. Although imaging of spinal dysraphism is complicated, a systematic approach and
