Revisions ⁶ to the TNM staging of lung cancer (8th edition): Rationale, radiologic findings and clinical implications

Fernando U Kay, Asha Kandathil, Kiran Batra, Sachin S Saboo, Suhny Abbara, Prabhakar Rajiah

Abstract

The Tumor, Node, Metastasis (TNM) staging system, adopted the Union for Internal Cancer Control (UICC) and the American Joint Committee on Cancer (AJCC), has been recently revised, and the new edition (8th) of the staging manual was published in January 2017. This edition has few but important evidence-based changes to the TNM staging system used for lung cancer. Radiologists should be aware of the updated classification system to accurately provide staging information to the oncologists and oncosurgeons. In this article, we discuss the rationale, illustrate the changes with relevance to radiology and review the clinical implications of the 8th edition of the UICC/AJCC TNM staging system with regards to lung cancer.
