Symptoms

Coronary

Coronary vasospasm refers to when a coronary artery suddenly undergoes either complete or sub-total temporary occlusion. In 1959, Prinzmetal et al. described a type of chest pain resulting from coronary vasospasm, referring to it as a variant form of classical angina pectoris. Consequently, this angina has come to be reported and referred to in the literature as Prinzmetal angina. A subsequent study distinguished this type of angina from classical angina

Vasospastic angina: A literature review of current evidence

<https://pubmed.ncbi.nlm.nih.gov/30197243>

VSA can be involved in many clinical scenarios, such as stable angina, sudden cardiac death, acute coronary syndrome, arrhythmia or syncope. Coronary vasospasm is a heterogeneous phenomenon that can occur in patients with or without coronary atherosclerosis, can be focal or diffuse, and can affect epicardial or microvasculature coronary arteries.

Sep 01, 2020 · Coronary artery spasm is an important cause of ischemic ECG changes in the absence of significant coronary artery disease. Common triggers for CAS include exercise, smoking, and vasoactive drugs. Complications of CAS include myocardial necrosis; tachyarrhythmias, such as ventricular tachycardia or ventricular fibrillation; bradyarrhythmias, such as complete heart block and ...
