Concepts of hypoxic NO signaling in <sup>1</sup>remote ischemic preconditioning

Matthias Totzeck, Ulrike Hendgen-Cotta, Tienush Rassaf

### Abstract

Acute coronary syndromes remain a leading single cause of death worldwide. Therapeutic strategies to treat cardiomyocyte threatening ischemia/reperfusion (I/R) injury are urgently needed. Remote ischemic preconditioning (rIPC) applied by brief ischemic episodes to heart-distant organs has been tested in several clinical studies, and the major body of evidence points to beneficial effects of rIPC for patients. The underlying
