**Name of Journal: World Journal of Cardiology****ESPS Manuscript NO: 20273****Manuscript Type: REVIEW****Ventricular repolarization measures for arrhythmic risk stratification**

Francesco Monitillo, Marta Leone, Caterina Rizzo, Andrea Passantino, Massimo Iacoviello

**Abstract**

Ventricular repolarization is a complex electrical phenomenon which represents a crucial stage in electrical cardiac activity. It is expressed on the surface ECG by the interval between the start of the QRS complex and the end of the T wave or U wave (QT). Several physiological, pathological and iatrogenic factors can influence ventricular repolarization. It has been demonstrated that small perturbations in this process can be a potential trigger of malignant arrhythmias, therefore the analysis of ventricular repolarization represents
