1 Outcomes and long-term survival of coronary artery surgery: The controversial role of opium as risk marker

Mahdi Najafi, Leila Jahangiry, Seyedeh Hamideh Mortazavi, Arash Jalali, Abbasali Karimi, Ali Bozorgi

#### Abstract

**AIM:** To study survival in isolated Coronary Artery Bypass Graft patients and to evaluate the impact of preoperative chronic opium consumption on long-term outcome.

**METHODS:** Cohort of 566 isolated Coronary Artery Bypass Graft patients as Tehran Heart Center cardiac output measurements (THC-COM) was conducted. Daily evaluation until discharge as well as 4- and 12-month and 6.5-year follow-up information for survival status were fulfilled for all patients. Long-term 6.5-year overall and opium-stratified survival, adjusted survival curves based on opium consumption as well as possible predictors of all-cause mortality using multiple cox regression were determined by statistical analysis.

**RESULTS:** 6.5-year overall survival was 91.8%; 86.6% in opium consumers and 92.7% in
