Exercise oscillatory ventilation: Mechanisms and prognostic significance

Dhakal BP *et al.* Exercise oscillatory ventilation

Bishnu Prasad Dhakal, Rajeev Malhotra, Gregory Dyer Lewis

### Abstract

Alteration in breathing patterns characterized by cyclic variation of ventilation with a period of approximately one minute known as periodic breathing has been recognized in patients with advanced heart failure for nearly two centuries. Periodic breathing during exercise is a non-invasive parameter that is easily discernible along with other gas exchange parameters during submaximal cardiopulmonary exercise testing. Recent studies have shown that periodic
