Assessment of aortic valve disease – a clinician oriented review

Andrei D Mărgulescu

### Abstract

Aortic valve disease (aortic stenosis, AS, and aortic regurgitation, AR) represents an important global health problem; when severe, aortic valve disease carries poor prognosis. For AS, aortic valve replacement, either surgical or interventional, may provide definite treatment in carefully selected patients. For AR, valve surgery (either replacement or – in selected cases – aortic valve repair) remains the gold standard of care. To properly identify those patients who are candidates for surgery,
