The Basics of Sentinel Lymph Node Biopsy: Anatomical and ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6699370>

Labeled **lymph nodes** are surgically excised and histologically examined for the presence of disease. Identification and biopsy of the SLN can correctly indicate the status of the draining **lymph** node basin. In 1992, Morton was the first to identify the presence of regional **lymph nodes** and to map SLNs using isosulfan blue in patients with melanoma .
