Feb 11, 2021 · The COVID-19 Treatment Guidelines Panel (the Panel) is committed to updating this document to ensure that health care providers, patients, and policy experts have the most recent information regarding the optimal management of COVID-19 ...

Coronavirus (COVID-19) treatment

...

Hundreds of treatments are being developed and tested to prevent or treat COVID-19 including several vaccines that are nearing approval. Veklury (remdesivir) was approved by the US Food and Drug Administration to treat patients who are at least 12 years old and require hospitalization, but the World Health Organization later recommended against its use. The FDA issued an emergency use authorization for Regeneron, an experimental medicine that was given to President Trump, to treat Covid-19 in high-risk patients with mild to moderate disease.

Many people infected with COVID-19 will have mild symptoms and can recover at home. The CDC recommends basic measures such as rest, hydration, and over-the-counter medicines such as acetaminophen. Patients with more serious symptoms such as trouble breathing, chest pain, or bluish lips or face should seek emergency medical care.

Coronavirus (COVID-19) treatment

Hundreds of treatments are being developed and tested to treat COVID-19.

Veklury ([remdesivir](#)) was approved by the US Food and Drug Administration to treat patients who are at least 12 years old and require hospitalization, but the World Health Organization later recommended against its use. The FDA issued an emergency use authorization for [Regeneron](#), which has been approved by the European Medicines Agency. [Monoclonal antibody \(mAb\) treatment](#) is also an option for some high-risk patients with mild to moderate symptoms. These antibodies are made in a lab and given through an infusion to reduce the viral load.

Many people infected with COVID-19 will have mild symptoms and can recover at home. The CDC recommends basic measures such as rest, hydration, and over-the-counter medicines such as acetaminophen. Patients with more serious symptoms such as trouble breathing, chest pain, or bluish lips or face should seek emergency medical care.

Coronavirus (COVID-19)

Also known as: SARS-CoV-2, 2019 Novel Coronavirus, nCoV

SymptomsDiagnosisCausesTreatments

2019-nCoV acute respiratory disease, designated as novel coronavirus pneumonia (nCP) by China, and designated as the coronavirus disease 2019 (COVID-19) by the WHO, is an infectious respiratory disease caused by the 2019 novel coronavirus (2019 nCoV), first detected during the 2019-20 Wuhan coronavirus outbreak.

- Symptoms of coronavirus (COVID-19) are a cough, a high temperature and shortness of breath.
- Simple measures like washing your hands often with soap and water can help stop viruses like coronavirus (COVID-19) spreading.

Coronavirus (COVID-19) treatment

...

Hundreds of treatments are being developed and tested to treat COVID-19.

Veklury (**remdesivir**) was approved by the US Food and Drug Administration to treat patients who are at least 12 years old and require hospitalization, but the World Health Organization later recommended against its use. The FDA issued an emergency use authorization for **Regeneron**, which has been approved by the European Medicines Agency. **Monoclonal antibody (mAb) treatment** is also an option for some high-risk patients with mild to moderate symptoms. These antibodies are made in a lab and given through an infusion to reduce the viral load.

Many people infected with COVID-19 will have mild symptoms and can recover at home. The CDC recommends basic measures such as rest, hydration, and over-the-counter medicines such as acetaminophen. Patients with more serious symptoms such as trouble breathing, chest pain, or bluish lips or face should seek emergency medical care.
