**Metastatic disease to the liver: Locoregional therapy strategies and outcomes**

Zane KE *et al.* Locoregional therapy for metastatic disease to the liver

Kylie E Zane, Jordan M Cloyd, Khalid S Mumtaz, Vibhor Wadhwa, Mina S Makary

## Abstract

Secondary cancers of the liver are more than twenty times more common than primary tumors and are incurable in most cases. While surgical resection and systemic chemotherapy are often the first-line therapy for metastatic liver disease, a majority of patients present with bilobar disease not amenable to curative local resection. Furthermore, by the time metastasis to the liver has developed, many tumors demonstrate a degree of resistance to systemic chemotherapy. Fortunately, catheter-
