Current update on primary pancreatic lymphoma | SpringerLink

<https://link.springer.com/article/10.1007/s00281-015-0620-8>

Jan 04, 2016 • Secondary pancreatic involvement in lymphoma commonly occurs in the presence of widespread nodal or extranodal lymphoma and may be seen in up to 30% of cases [1]. However, on rare occasions, the bulk of the lymphomatous mass may be localized to the pancreas, which may be referred to as "primary pancreatic lymphoma" (PPL).
