Manuscript Type: CASE REPORT

Intermittent facial spasms as the presenting sign of a recurrent pleomorphic adenoma.

Rosalie A Machado, Sami P Moubayed, Azita Khorsand, Juan C Hernandez- Prera ,
Mark L Urken

Abstract

The intimate anatomical relationship of the facial nerve to the parotid parenchyma has a significant influence on the presenting signs and symptoms, diagnosis and treatment of parotid neoplasms. However, to our knowledge, hyperactivity of this nerve, presenting as facial spasm, has never been described as the presenting sign or symptom of a parotid malignancy. We report a case of carcinoma arising in a recurrent

Intermittent facial spasms as the presenting sign of a recurrent pleomorphic aden
