**Stereotactic radiotherapy for prostate cancer: A review and future directions**

**Yusef A Syed, Ami K Patel-Yadav, Charlotte Rivers, Anurag K Singh**

#### **Abstract**

Prostate cancer affects over 200000 men annually in the United States alone. The role of conventionally fractionated external beam radiation therapy (RT) is well established as a treatment option for eligible prostate cancer patients; however, the use of stereotactic body radiotherapy (SBRT) in this setting is less well defined. Within the past decade, there have been a number of studies investigating the feasibility of SBRT as a potential treatment option for prostate cancer patients. SBRT has been well studied in other disease sites, and the shortened treatment course would allow for greater convenience for patients. There may also
